

molecule of claim 1, wherein said promoter is urine-producing cell-specific, and wherein said mammal secretes said biofilament of claim 1.

13. (Twice Amended) A method for producing a biofilament, said method comprising the steps of:

(a) providing an embryonal cell transformed with a nucleic acid molecule encoding a biofilament;

(b) growing said transformed embryonal cell to produce an animal comprising milk-producing or urine producing cells that express and secrete said biofilament, and

(c) isolating said biofilament from said biofilament expressing and secreting cells from said animal.

REMARKS

As a preliminary matter, Applicant and the undersigned wish to express their appreciation to the Examiner for agreeing, in a telephone discussion with the undersigned, to enter the present amendment and to fully consider the arguments herein and the accompanying declaration, despite this Action being designated final; this case is a CPA of an earlier application, and this is the first paper submitted by Applicant in the present case.
